DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 3/3/10 has been entered.

Examiner Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eric Sophir on 1/8/10.

Claims 8, 16, 18 and 23 are amended as follows.

Claim 8. A system comprising:

- a customer terminal;

- a trader terminal operatively coupled to the customer terminal through a communications network;
- a processor;
- wherein the processor is configured to dynamically create sets of class components to handle one or more ~~transactions involving a trade requests~~ from a customer at the customer terminal, with each set of class components further comprising:
 - a first component comprising functions for sending messages and receiving messages to the system on behalf of the customer;
 - a second component comprising functions for controlling access to the system by the customer; and
 - a third component comprising functions for sending messages to and receiving messages from the first component and a trader at the trader terminal; and
- wherein each set of class components is dynamically created for each customer submitting the one or more trade requests; and
- wherein the processor comprises a timer wherein the trade request from the customer is automatically revoked at a predetermined duration of time if the trader does not accept the trade request, and wherein each set of class components is dynamically created for each customer attempting to execute a transaction.

Claim 16. A method comprising:

- ~~in a computer system:~~
- ~~dynamically creating, in a processor,~~ a set of class components to handle one or more ~~transactions involving a trade requests~~ for a customer, which further comprises:
 - creating a first component comprising functions for sending messages and receiving messages to a system on behalf of a customer;
 - creating a second component comprising functions for controlling access to the system by the customer; and

- creating a third component comprising functions for sending messages to and receiving messages from the first component and a trader;
- wherein each set of class components is dynamically created for each customer submitting the one or more trade requests; and
- transmitting messages between the customer and the trader through a communications network; and
- automatically revoking, by the processor, at a predetermined duration of time the trade request from the customer if the trader has not accepted the trade request.

Claim 18. A trading services computer program product comprising: at least one computer-readable medium; encoded on computer-readable medium that when executed by a computer system performs a method comprising:

- a class creation module stored on the at least one medium, and operable, upon a customer accessing of a customer to trading services of the computer program product to submit for handling one or more transactions involving a trade requests from the customer to a trader, to create creating at least one set of classes, each set comprising at least one class;
- wherein the created classes include at least one of:
- an access control class configured to control access to the system by the customer;
- a trading system communications class configured to control transmission and receipt messages between the customer and the trader; and
- a translator class configured to control interaction between class components; and
- wherein each set of class components is dynamically created for each customer submitting the one or more trade requests; and
- a timer module stored on the at least one medium, and operable to automatically revoke revoking at a predetermined time the trade request from the customer if the trader does not accept the trade request wherein each set of class components is dynamically created for each customer attempting to execute a transaction.

Claim 23. A computer implemented method for trading financial instruments, the method comprising:

- a class creation module stored on the at least one medium, and operable, upon a customer accessing of a customer to trading services of the computer program product to submit for handling one or more transactions involving a trade requests from the customer to a trader, to create creating, in a processor, at least one set of classes, each set comprising at least one class;
- wherein the created classes include at least one of:
 - an access control class configured to control access to the system by the customer;
 - a trading system communications class configured to control transmission and receipt messages between the customer and the trader; and
 - a translator class configured to control interaction between class components; and
 - wherein each set of class components is dynamically created for each customer submitting the one or more trade requests; and
 - a timer module stored on the at least one medium, and operable to automatically revoke revoking, by the processor, at a predetermined time the trade request from the customer if the trader does not accept the trade request wherein each set of class components is dynamically created for each customer attempting to execute a transaction.

Allowable Subject Matter

Claims 8 - 27 are allowed.

The following is a statement of reasons for indication of allowable subject matter.

The prior art fails to teach or suggest the limitations of:

"to submit one or more trade requests to a trader, creating ... at least one set of classes, each set comprising at least one class; wherein the created classes include at least one of: an access control class configured to

Art Unit: 3693

control access to the system by the customer; a trading system communications class configured to control transmission and receipt messages between the customer and the trader; and a translator class configured to control interaction between class components; wherein each set of class components is dynamically created for each customer submitting the one or more trade requests" (as in Claim 23).

Such limitation is present in all independent claims.

It is old and well known in the art for to transmit and process trade requests for financial instruments through a networked computer system. Such a computerized system would require programming written in a computer language. One such computer language is object-oriented computer languages which dynamically creates "dynamically allocated objects" during the execution of the computer program.

The instant application distinguishes from these old and well known practices by dynamically creating a set of classes, each set created dynamically for each customer submitting as trade request, wherein each set comprising at least one class which controls access to the system, controls communication or controls interaction between classes.

Kalmus (US Patent 4,674,044) discloses a method/system for submitting and processing trade requests for financial instruments. (see abstract). Neither this patent, alone nor in combination with others, discloses nor suggests the feature of dynamically creating a set of classes, each set created dynamically for each customer submitting as trade request, wherein each set comprising at least one class which controls access to the system, controls communication or controls interaction between classes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
